

Why NetScore WMS Mobile for NetSuite?

NetScore's platform offers unparalleled versatility and flexibility, allowing you to tailor the solution to your specific needs. Whether you're using a tablet running on Android or iOS, or a rugged handheld device with a built-in 2D scanner, our solution supports a wide range of devices to suit your warehouse operations. Further more, NetScore WMS provides support for various scanning methods, including barcodes, QR codes, and RFID tags, providing flexibility to choose the technology that best suits your inventory management needs and warehouse environment. The ability to customize the solution and support diverse scanning options will help streamline your warehouse operations and increase efficiency.

SuiteSuccess Ready

Differentiators

- The solution can be run on any device that can leverage the Android or IOS operating systems. Customers can choose a wide variety of equipment from tablets to more ruggedized devices with built-in 2D / 3D barcode readers. Customizable to the client's business needs.
- Replaces the paper-based fulfillment application in NetSuite with an intelligent system utilizing barcode technology to improve accuracy in all aspects of warehouse operations.
- The user licensing for this application does not require an individual NetSuite license for each user of the WMS. This reduces the licensing cost to the end user customer.
- The system leverages the standard NetSuite application for bin and item setup.
- The application can be rapidly deployed in less than one week.

Customer ROI

Optimizes warehouse activities through intelligent automation while increasing accuracy of order processing and inventory management through the use of barcode technology. Reduces cost by ensuring orders are being filled accurately reducing the number of returns.

Target Customers, Markets, Opportunities

NetScore WMS Mobile is designed for distributors, manufacturers, and retailers, who are interested in deploying barcode technology to assist in optimizing warehouse operations

NetScore WMS Mobile for NetSuite Battle Card

Key Features

- Deployed in NetSuite as a pre-built solution and is customizable using standard NetSuite toolsets.
- Supports the ability to print barcode labels using wireless printers during the receiving process for labeling of the inbound product.
- Zones can be established to support picking in multiple units of measure and replenishment processes for high volume pick phases from bulk locations.
- Picking options allow for pick-to-order or batch picking for groups of orders.
- Performs cycle counts or a full inventory of the warehouse using handheld device

Qualifying Questions

- Are you interested in deploying barcode technology to support warehouse operations?
- Do you have customized warehouse business processes that need to be supported through a flexible/modifiable solution?
- Is it important your WMS is built on the NetSuite platform and not interfaced through a connector or other API strategy?
- Are you looking for a WMS solution that offers a wide variety of choices for equipment you can utilize?
- Do you want to be able to process orders through your warehouse efficiently and accurately?

Customer Pain Points

- Low fill rates of orders due to inaccurate inventory counts.
- High level of returns due to picking errors.
- Lack of efficiency in the warehouse due to manual processes.
- No real-time inventory visibility.
- No audit trail of order processing.
